

# Financial Management

The CMI Financial Management System is the centerpiece to the Financial Suite of Applications. The FMS is a comprehensive solution that includes General Ledger, Accounts Payable, Purchasing/Requisitions, Budgeting and Treasurer Modules. CMI's FMS system is designed to handle the fund accounting requirements of local governments and is used by over 300 organizations ranging in size from one user system to large departmentalized organizations with over two hundred users. The strength of the system is its ability to adapt to an organization's needs. Depending on your organizations requirements the system can be

implemented as a small scale solution or more comprehensive to include many users within the organization. CMI can assist you in creating a comprehensive easy to utilize system that allows the data to be entered, retrieved and analyzed with common office tools such as Microsoft Office®. Contact us today to set up your free software demonstration.
